

VisionPoint 10.0 System Manager

System Manager is the core of your VisionPoint system, combining powerful utilities and system-wide administration functions into a single control center. It houses critical system passwords along with customer, vendor, and inventory codes.

System Manager is required.

Highlights of System Manager

- Manages multi-user access and controls key assignments
- Allows you to change "key values," such as customer, vendor, and item inventory numbers- and automatically updates all data files and creates audit trails
- Provides for changing company information, reindexing files, or adding new companies for any installed VisionPoint application
- ReadyView(tm) file browsers allow you to create read-only data views on any file. Views can be password protected and are available via hotkey
- Business Status Report(tm) provides real-time forecast of revenue, expenses, cash flow, and gross margin
- Context-sensitive help system
- Maintains lookup tables and centralized password controls for data entry validation-add, change, or delete passwords and lookup tables for any company or SBT application
- Displays system configuration information
- Stores information about your database files and index keys in a dictionary, and lets you define custom sort tags on any of your files
- Allows distribution of data files across multiple file servers
- Prints labels for any customer, vendor, or inventory item for any VisionPoint application
- Includes library of functions for development of custom applications

Integration

System Manager works with all VisionPoint 10.0 programs by combining utilities and system-wide functions into a single application. System Manager is required for all VisionPoint installations.

Standard Reports

- Business Status Report
- Key Change Audit Log
- Key Change List
- System Configuration
- System Manager Specifications
- Maximum number of companies: 99
- Up to 15 levels of password protection for each application
- VisionPoint Unlimited version supports any number of users on a single LAN

System Recommendations

Listed below are SBT current system recommendations for VisionPoint 10.0 operating environments. The actual system requirements (both workstation and network servers) can vary significantly depending on your actual networking environment. For example, topology, drivers, application software, and networking protocols can change the following recommendations.

All system recommendations are subject to change without notice. Call SBT Technical Support for the latest information.

Windows Workstations

For Windows workstations, you will need the following:

System Hardware

- Intel Pentium, 266 MHz class computer or faster
- Minimum memory 32MB RAM; 64MB or more recommended
- Hard disk requirements: Refer to the installed Operating Software System requirements or recommendations for single user stations.

NOTE: If installing and running VisionPoint 10.0 applications on a workstation refer to the Network server hard disk space requirements.

- 2X CD ROM drive or faster
- A Microsoft compatible mouse
- 3.5-inch High Density floppy disk drive
- Network Interface Card (required for network installation)

Operating Software

- Microsoft Windows 95, 98, or Windows NT 4.0 Workstation
- Network operating software for Windows workstations

Required Fonts

- Fox Font, MS Sans Serif, and Arial.

Additional Software

- Visual Fox Pro Version 6.0 (for source code versions only)

Printers

- Full HP LaserJet IV or later, or LaserJet compatible printers (Standard drivers for HP6P recommended)
- Full Epson dot matrix compatible printers (Not recommended due to speed issues with Windows printing).

Network Servers

For network servers, you will need the following:

System Hardware

Intel Pentium, 266 MHz class computer or faster

- Minimum memory 128MB RAM; 256MB or more recommended. Refer to the Network Operating Software System requirements or recommendations based on network configuration.
- Hard disk requirements: Refer to the Network Operating Software
- System requirements or recommendations based on network configuration.

Available hard disk capacity for VisionPoint 10.0:

Windows Compiled: Minimum of 30 MB for System Manager, documentation on disk, and Sample Data, plus add an average of 11 MB for each application module. Add 20 MB for Payroll. Windows Source: Minimum of 40 MB. Add 60MB for documentation on disk.

Additional hard disk space is required for customer database files.

- 2X CD ROM drive or faster
- A Microsoft compatible mouse
- 3.5-inch High Density floppy disk drive

- Network Interface Card

Network Operating Software

- Novell Netware 3.12 or later
- Microsoft Windows NT Server 4.0

Additional Software

- Visual Fox Pro Version 6.0 (for source code versions only)

Printers

- Full HP LaserJet IV or later, or LaserJet compatible printers (Standard drivers for HP6P recommended)
- Full Epson dot matrix compatible printers (Not recommended due to speed issues with Windows printing).
