

VisionPoint® 10.0 Overview

The world's most widely installed Windows® accounting system! Designed to provide the power and flexibility required by businesses today and into the next century.

Overview

Small business software with enterprise-wide applications

Designed for the small to mid-size business, SBT Accounting Systems' VisionPoint 10.0 is a feature-rich application that delivers big business functionality. VisionPoint 10.0 can accommodate growth and change as your business moves forward. It has the features you need now, plus the ones you'll want in the future, including:

- Flexibility for modifications as your business evolves
- The capacity to accommodate substantial growth
- Industry-standard technology
- Instant information at your fingertips with SBT ReadyView(tm)
- Year 2000 certification

Versatile software that's ready when you are

In addition to providing flexibility, VisionPoint 10.0 is a reliable out-of-box solution designed to get your business up and running quickly. Take advantage of VisionPoint's easy user interface and low-effort setup. And you'll get open, modular architecture that enables you to make modifications as needed.

VisionPoint lets you start with a basic system and add specialized applications as your needs evolve. The high-powered combination of available source code and more than 200 add-on modules makes VisionPoint 10.0 an adaptable program that can be tailored to fit your company's needs perfectly: you can enhance your system by adding a simple procedure unique to your industry, or redesign an entire function.

Source code and modifiability

Full access to source code lets you modify the software to fit the unique needs of your company. Hundreds of standard reports are included, with nearly infinite ability to create custom reports. You can change everything from basic data capture through calculation and reporting.

Proven reliability using the latest technology

VisionPoint 10.0 is reliable software that's based on Microsoft technology. This means you'll have a familiar interface that's easy to use. VisionPoint has been in use for over a decade, and has grown up with some of the nation's best-known corporations. With

successful implementations in distribution, manufacturing, service and retail industries, VisionPoint has earned a well-deserved reputation as the workhorse of the average business. With more than 500,000 users in 63 countries, SBT has established a solid track record for safe and reliable handling of sensitive financial software.

Industry-standard tools, optimum SBT technology

- VisionPoint 10.0 supports true 32-bit platform – including Microsoft Windows 95, Windows 98 or Windows NT 4.0, complete with screen fonts, icons, and other graphic interface features.
- Networks supported include Microsoft Windows NT 4.0 and Novell Netware.
- VisionPoint is compiled in Microsoft's top-end database language, Visual FoxPro 6.0.
- SBT's robust interface uses pick lists that allow for viewing more records at a time, and mouse support offers point-and-click navigation.

Doc on Disk means information at your fingertips

With VisionPoint 10.0 documentation is now available electronically. The new Documentation on Disk (Doc on Disk) features an easy to use table of contents and index that cross-reference other relevant material. Now your answers are only a click of the mouse away. You can view Doc on Disk in a Web browser or Adobe Acrobat Reader. And you can print out or bookmark specific sections for easy reference.

Laser Forms

New with VisionPoint 10.0 is the fully integrated Laser Forms feature, a multi-user print utility that enables you to produce high-quality order forms, statements, invoices, and packing slips from Purchase Orders, Sales Orders, and Accounts Receivable. In addition to using your own custom logo, you can also customize your forms with signatures and special graphics.

Real-time information puts you in control

SBT's advanced real-time capabilities give you instant access to current data, as well as allowing you to forecast revenue, expenses, cash flow and gross margin. VisionPoint's Business Status Report(tm) lets you check vital company measurements in real time. This unique feature operates like a business thermostat. It checks AR balance, AP balance, month-to-date sales, and cost of goods-even shows projected totals for the month (or any other period).

VisionPoint also provides ReadyView(tm) file browsers that give you unlimited data access the way you want to see it. Display any information, in any order, customized for any user. This technology means concise, immediate business management. For example,

you can quickly view all of your customers with more than \$5000 past due for more than 30 days. SBT's "snapshot" tools turn customer data into business information.

Year 2000 Certification

SBT understands that accounting software users are uniquely affected by the year 2000 computer problem. Date comparisons, amortizations, and projections are standard procedures in financial accounting. VisionPoint 10.0 solves the problem. VisionPoint automatically recognizes and processes accounting data into the Year 2000 and beyond, without user or programmer intervention.

A Full Suite of Modules

VisionPoint's fully-integrated suite of eight accounting modules applications offers a solid combination of power and flexibility.
